Marine Pollution Detection Dashboard

Prototype of the monitoring interface planned for the Sentinel-1 and Sentinel-2 detection pipeline, showing Indian coastal waters. Detections are candidates for analyst review, not confirmed pollution.

Simulated data: no model has been run yet

Oil-like features (5) | Floating debris (4) | Algal blooms (3)

Min confidence 50% Acquired within 30 days Hide dismissed

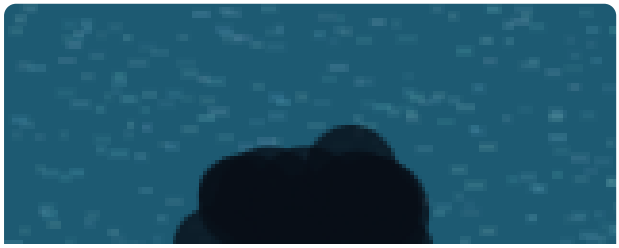

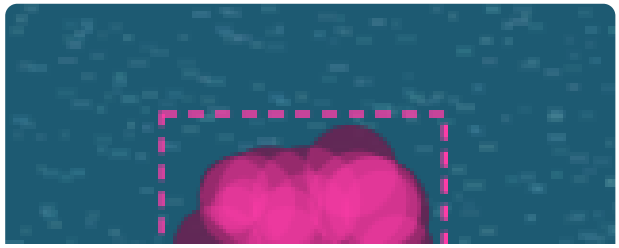

Schematic coastline for layout only. Marker size reflects detected area; colour reflects pollutant type.

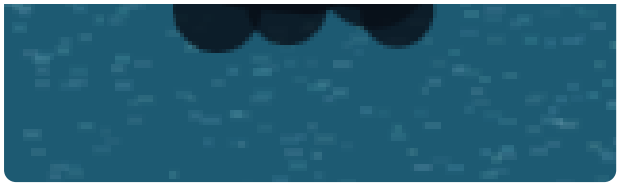

Off Mumbai

Oil-like feature Confirmed

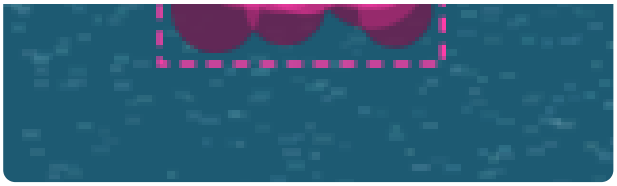

Model confidence: **88%**

Tile preview (simulated)

Predicted mask (simulated)

Satellite	Sentinel-1 SAR
Acquired	2026-10-27
Area	4.2 km²
Position	18.90°N, 72.55°E
Quality	Cloud-independent (SAR)
Look-alike risk	Medium. Dark patch near a shipping lane; low-wind slick not ruled out.
Provenance	S1A_IW_GRDH_20261027 · preprocessing v0.3 · model v0.1-demo

Satellite imagery alone cannot establish composition or source. Confirm with field or vessel data before reporting.
